

## Synergy Replicator 4.0 Powers World's Largest Distributed SharePoint 2010 Environment

**New York, NY—August 5, 2010**—Synergy today announced it has successfully deployed and configured the largest worldwide, distributed SharePoint 2010 environment using Synergy Replicator 4.0. This large scale performance and scalability benchmark is part of the enterprise testing effort underway for the major new release of Synergy Replicator, Synergy's flagship enterprise data replication solution for Microsoft SharePoint 2007 and 2010.

Using the latest Microsoft hardware virtualization technologies at the Microsoft Technology Center in New York City, the Synergy Massive Scalability Team was able to replicate content to more than 60 SharePoint 2010 server farms. This massive SharePoint environment was able to replicate hundreds of thousands of documents and hundreds of gigabytes of data over the course of a several hours.

Synergy Replicator is the only enterprise scale solution for real-time, event-based replication of SharePoint content that supports multi-engine environments. Replicator enables content to flow easily and efficiently from the sources of content creation to the consumers in an efficient, real-time manner. Synergy Replicator 4.0 builds upon this history with additional configuration options for optimizing overall performance, resource utilization and automatic configuration in multi-hop environments.

"Many of our corporate, public sector and military customers are also Microsoft SharePoint customers. They demand the most of their SharePoint solutions and, like the large-scale deployment we created in the Microsoft Technology Center, they use Replicator for securely sharing information around the world. We want to ensure that Replicator 4.0 will not only support their efforts, but exceeds their expectations," said David Seaman, VP SharePoint Technologies, Synergy. "This massive scalability benchmark demonstrates the power and efficiency of Replicator 4.0."

Synergy Replicator 4.0 is scheduled to be released in September 2010. For more information, please visit [www.synergy.com](http://www.synergy.com) or email [info@synergy.com](mailto:info@synergy.com).

### About Synergy

Founded in 1997, Synergy works to solve the needs of globally distributed enterprise-sized businesses. Specializing in Microsoft SharePoint Products and Technologies, Synergy helps global organizations overcome the challenges they face in sharing information around the world. Synergy's flagship product, Synergy Replicator, is a web-based platform used to synchronize and manage business intelligence in real-time across a wide area SharePoint server environment. Replicator ensures uninterrupted access to SharePoint content, enhancing employee productivity and efficiency, and improving branch office performance globally. Synergy is a Microsoft Gold Certified partner. [www.synergy.com](http://www.synergy.com)
