Centera Storage Connector

for Livelink®

EMC® is the first company to provide a networked storage solution designed exclusively for document content like that stored in Livelink®

With the EMC Centera® content addressed storage (CAS) solution you get fast, affordable online access to your data and you will be confident in its authenticity and integrity.

Syntergy has partnered with EMC® to create a product that stores Livelink® content in Centera® in a fully transparent way. It provides for migration of inactive Livelink® content to Centera®. For customers with terabytes of content this provides simple, cost effective storage.

Our Centera® Storage Connector for Livelink® allows Centera® to be used as the default storage provider for all new Livelink® content or for selective new content since we provide administrators the ability to configure rules that determine which content is migrated to Centera® storage.

Key Features

■ Transparent daily migration of inactive content to Centera® subsystems

■ Administrative control of the aging parameters for inactive content migration

■ Uses the standard Livelink® Storage Provider architecture to insure full transparency for all Livelink® operations

■ Supports Livelink® 9.5 Storage Provider Rules use for default or selective new content storage on Centera® subsystems

■ Supports Livelink® 9.2 and 9.5 releases

■ Centera® is available in smaller-capacity, rackable configurations

Specifications

Servers	Livelink® Versions 9.2 & 9.5
Databases	Oracle®, SQL*Server®

Benefits

Livelink® Participation in a Shared ECM Storage Device

Our module allows Livelink® to use an enterprise oriented Centera subsystem along with content from any other Enterprise Content Management (ECM) application that also supports Centera®, such as Centera® enabled Exchange servers. This provides economy of scale storage benefits across multiple enterprise applications. Centera® provides content addressable storage and insures that duplicate content from multiple applications are stored only once.

Enables Transparent Two-Tier Storage for Livelink®

Centera® Storage Connector will store new and frequently accessed content on fast local file systems and transparently move aged inactive content to the cost effective Centera® subsystems. All future access to the content migrated to Centera® continues to be accessible in a fully transparent fashion.

Reduced Livelink® Administrative Burden for Massive Content

Centera® offers transparent multi-site content replication. This can be a realistic alternative to the burden of managing daily/weekly tape backups for very large Livelink® customers. Our module for two-tier storage takes advantage of this by migrating content to Centera® and still keeping the local copy for a configurable number of days to insure Centera® has had adequate time to replicate its content before the local file system copy is removed.

Cost-effective Scalability

As your information assets grow, you can bring three terabytes or more of content online with EMC Centera®. You can expand your network to petabyte-level capacity—easily, non-disruptively, and cost effectively.
