

OPEN TEXT ECM/LIVELINK® PRODUCTS OVERVIEW

Synergy works to solve the needs of globally distributed enterprise-sized businesses. Synergy's flagship product, Replicator, is a back end, web-based platform used to synchronize and manage data with full real-time across a wide area SharePoint server environment. Products available include:

Replication

We offer a number of replication products from our Replicator product that allows application level replication from a primary server to a secondary server. You can select specific areas for replication or the entire site. Two primary servers allow bi-directional replication. A two server Hot Backup product is available based on this technology as well as a Content Mover product that allows for migration of content from one server to another, useful in QA and Development environments.

Bulk Loader

Bulk Loader loads documents, attributes and meta data from all types of applications, storage areas and legacy systems. Flexible loading capabilities allows for unattended loading, intelligent folder structure creation and the ability to define complex attributes. Includes multi-file add that allows you to add content to your knowledge base by simply dragging and dropping multiple files or folders into the browser.

Livelink to SharePoint Migration

Our newest product, ShareLink, provides an easy method for migrating data from Livelink to SharePoint. Synergy is uniquely qualified to help organizations migrate their content from Livelink to SharePoint because, as a company, we have over 20 years combined experience in the two technologies. We have developed proven tools that allow data to be exported from Livelink, modified and then imported into SharePoint. We also provide expert migration services based on several years of experience migrating data to SharePoint.

Content Server Modules

■ Document Management

- Replicator
- Centera Storage Connector
- Bulk Loader
- Content Mover

- Workflow Escalation
- In Box Proxy

■ Security

- Enhanced Password
- Extranet Secure

■ Migration

- Share-Link
- Bulk Exporter
- Content Mover

■ Other Popular Modules

- Auto Numbering
- Soft Documents

Workflow

Livelink workflow continues to be widely popular with our customers as they see excellent return on investment with their projects. As capable as workflow is, there is still a need for additional capability such as enhanced email capability, advanced forms functionality and the ability to escalate steps that are late. To meet these needs and other advanced requirements Synergy developed Workflow Steps, Workflow Escalation and Workflow Map Printer several years ago. As more and more organizations use these tools and provide feedback the functionality continues to grow to the point where they are now a standard requirement for organizations that implement workflow.

Increase Your Corporate Productivity
Synergy specializes in systems that extend the capabilities of SharePoint®. Our mission is to provide cost effective solutions that scale from the department to the enterprise.
