

# CONNECT

## for SharePoint

## DISCOVER SHAREPOINT FARMS AND THE CAPABILITIES THEY OFFER

### Connect for SharePoint

Discover SharePoint farms and the capabilities they offer. Utilize the functionality in Connect for SharePoint to explore SharePoint from your desktop and manipulate the environment from an architect and administrators perspective.

### Visualize

Full tree view of entire SharePoint 2007 or 2010 farm. Details including size of environment, security model, and site structure. Object explorer provides detailed information on individual items.

### Data Management

Ability to move content around within a given farm, and with the Replicator runtime installed, the ability to move content and structure across farms is fully supported. Selective moving of content (including webparts and security) to different destinations, delete user permissions, add folders and other common operations all in a global view.

### Versatile

Moving content from pre-production servers to production, setup a job definition within Connect for SharePoint to push content on demand, exclude permissions, include selective webparts and enable features.

### Key Features

- Discover or Catalog SharePoint Farms
- View structure and layout of farm
- Compare selected areas within a farm or across farms
- Reports on overall content
- Move content within the farm or across farm
- Print/Export SharePoint structure
- View Farm configuration information

### Specifications

Synergy Replicator Runtime 4.0 is required for cross farm operations. Connect runs as a desktop application on Windows XP/Vista/7/Server 2008. Requires SQL Server Express or Server Editions 2005/2008. Available Q4 2010.

Synergy, Inc. has offices located in La Jolla, CA, USA | Vaughan, ON, Canada | West Sussex, England
