

MANAGEMENT CENTRAL

DETERMINE USER OR GROUP ACCESS RIGHTS. Provides administrators the ability to choose a specific user or group and generate a report that details all sites, areas, and lists the user has access to. This will be a full snapshot that details every item the user has access to and can be used for inventory or audit purposes.

DETERMINE SITE, AREA, OR LIST MEMBERSHIP. Provides administrators the ability to choose an area, site, or site collection and generate a report that details the membership and access rights (users, groups, security settings, and permissions).

SITE MONITOR. Get a handle on site and list permissions. Administrators can be alerted when permission change on a site.

REGISTER USERS FOR A SITE. In order to assign a task item to a user, the specific user must have already “participated” in the site in order for their name to appear in the “Assign To” list. The Management Central module allows Administrators to automatically “register” all users or specific users with the click of a button. There is no need to send an e-mail to users asking them to navigate to the site.

BENEFITS

REDUCE ADMINISTRATION COST

Centralized administrative interface provides an efficient method for managing sites.

SECURITY AND AUDIT REPORTS

Administrators can generate security and audit reports.

ENFORCE PERMISSION MODEL

Service watches for changes to permissions on a site against a set of templates. Any changes are identified and an alert is created.

SPECIFICATIONS

SERVERS: SharePoint™ Portal Server 2003 and Windows SharePoint™ Services 2.0, SP1 and above

KEY FEATURES

- User or Group access report
- Site or Area membership report
- Expand AD groups
- Proactively monitor site security
